NOW HIRING FOR A
Lead Process Automation Engineer

This role leads automation initiatives from conception through deployment, collaborating with cross-functional teams to drive business efficiency, and implementing best practices. This position is responsible for analysis, design, development, testing and operationalization of solutions to optimize business processes and requires a deep understanding of process automation principles, Azure cloud technologies, and a commitment to delivering high-quality solutions.

What **qualifications are needed?**

- Four-year college degree required with emphasis in Computer Science, Software Engineering, Mathematics or Business preferred. Power Automate certification (e.g., PL-900 or PL-400) or other certification preferred.
- Senior level of competency with 5+ years of hands-on experience in RPA development with at least 2 years specializing in Microsoft Power Automate.
- Strong proficiency in Microsoft Power Automate, including experience with UI flows, Power Apps, and Power BI integrations.
- Expertise in scripting and programming languages such as JavaScript, Python, or C#.
- Solid understanding of API integrations, webhooks, and data flows between Power Automate and other systems.
- Experience working in an Azure DevOps environment and supporting production operations including tools like Git.
- Familiarity with Microsoft ecosystem, including Office 365, Azure, and Power Platform components.
- Experience with Agile development practices and tools (e.g., Jira, Azure DevOps).
- Passion for process analysis and experience in storytelling using the data and processes.
- Knowledge and understanding of Business Process Reengineering (BPR) methodology and standards.
- Understanding of principles of data engineering, including data wrangling/transformation, tools or programming languages, and data visualization/BI technologies for the purposes of automating processes involving data manipulation.
- Ability to discuss technical issues effectively with other data processing professionals, technical teams as well as non-technical stakeholders.
- Demonstrated abilities in problem solving, root cause analysis and ability to independently identify solutions.
- Ability to think orderly, logically, and analytically showcasing strong problem-solving skills.
- Ability to work and travel independently and use general office equipment, give speeches, and make presentations.
- Must be goal-oriented and have a strong sense of team solidarity.
- Ability to work with IT leadership to help establish emergent processes and procedures to help enable the success of Data Management and Analytics.
